

cab labelbase – sticking labels and removing them without residues

When removing labels, for example from transport boxes, there are frequently remaining adhesive residues on the substrate. To remove these residues completely a lot of cleaning effort is necessary. If new labels are simply stuck onto the old ones, barcodes and other relevant information can no longer be detected. It does not have to be that way!

To reduce cleaning efforts to a minimum resp. avoid errors in product identification, we offer the innovative cab labelbase solution.

Good reasons for cab labelbase

- Basis for multiple application on products
- Smooth fixation
- Easy application of labels
- If necessary, quick removal of the label without leaving any residues.
